

Swing & long-term regime monitor

Market data **2026-08-28** · Generated 2026-08-28T18:16:13+02:00 · 20/63-day swing and 126/252-day investing research. Long-only means no short positions.

How to read this

Display	Interpretation and thresholds
Data status	Current: ≤1 expected Oslo session behind. Delayed: 2–3. Stale/blocked: >3 or hard failure; no model view.
Horizons	20/63 days are swing horizons; 126/252 days are long-term. D is downside risk; R is OSEBX outperformance probability.
Regime probability	Identified at ≥60% with a ≥15-point lead. ≥75% is high conviction; otherwise uncertain.
Constructive / Defensive	Constructive is favorable trend/risk—not a buy signal. Defensive is elevated risk—not automatically a sell signal.
Label persistence	<70% low; 70–90% moderate; >90% high. Persistence means the label tends to remain, not that price will rise.
Downside risk	Probability of the historical worst drawdown quintile: <25% low; 25–40% elevated; >40% high.
Relative-return outlook	OSEBX outperformance probability: ≥60% favorable; 40–60% mixed; ≤40% unfavorable. Use only when out-of-sample calibrated.
Evidence support	Strong: ≥30 episodes and 5 years. Moderate: 15–29 and ≥3 years. Weak: <15. <5 or inadequate warm-up: unavailable.
HMM status	Validated secondary evidence may confirm/challenge. Experimental or failed validation must be ignored for suggested actions.

Current prompts

Instrument	Regime	20d D/R	63d D/R	Swing prompt	126d D/R	252d D/R	Long-term prompt
BRG.OL Borregaard	Neutral	D 23% R 46%	D 27% R 50%	Watch / monitor	D 26% R 48%	D 23% R 53%	Watch / monitor
NORBT.OL Norbit	Defensive	D 27% R 54%	D 20% R 64%	Defer new buying / review risk	D 25% R 63%	D 24% R 77%	Defer new buying / review risk

Evidence, exceptions & HMM

The transparent trend/risk composite is independently usable. Historical probabilities remain descriptive unless the walk-forward status says validated. Experimental HMM evidence never changes a suggested action.

Data and evidence exceptions

PUBLI.OL	Evidence support: Weak.
COSH.OL	Evidence support: Unavailable.
CMBTO.OL	Evidence support: Unavailable.

OSEBX HMM experiment

Experimental/failed validation. Current mapped label: **Constructive**. Constructive 100%; Neutral 0%; Defensive 0%. Selected 3 states from 3,298 post-warm-up rows. This result is educational and ignored by the action layer.

Provenance and link

- Yahoo Finance adjusted daily closes via yfinance (default market-data feed).
- Configured CSV overrides take precedence and are explicitly identified.
- OSEBX.OL is the benchmark for relative outcomes and the only HMM experiment in this version.
